

The World's Most Easy-to-Use Web Security Solution

Rock-Solid WAF

Protection against SQLi, XSS, LFI, RFI, Bad bots etc.

Website Health Monitoring

Monitors 60+ engines for website blacklisting

Data logging & Visualization

Helps you take data driven decisions

24x7 Support

Priority support on email and phone

Real-time Protection against Ever Evolving Web Threats

Astra protects your website against SQL injections, Cross Site Scripting, Local File Inclusion, Remote File Inclusion, Bad Bots and much more. A security solution that understands hackers' perspective and stays ahead of their next move. Made using OWASP standards, Astra stops millions of attacks every day. Our visualization helps you take data driven decision while planning architecture. Intuitive dashboard gives both a high level and a drilled down view of security status of the website. We understand that every website isn't the same, so we have customization panel which lets you whitelist the parameters which otherwise can be flagged as threats. *A product that a CEO finds maximum value in, a developer loves using and CIO can't live without!*

Intelligent firewall with ever evolving rule engine

Your website is protected against the most advanced threats by our ever expanding rule engine. Our proactive approach helps counter threats even before they arise. The rule engine is customized for different CMS's protecting against CMS-specific attacks. Also, signatures of various tools used by hackers are identified and rules specific to them are added on weekly basis.

Easy to Deploy & Requires No Management

It takes five minutes to deploy Astra on your website. No DNS changes to be done and no IT help required. Simply download the package from our website and unzip it after uploading it on your server.

Highlights

Quick decisions, no latency

Honeypots to trap the hackers

Amazing visualization & reporting

No IT help needed

Customized for CMS's: WordPress, OpenCart, Joomla

Every website running Astra gets this security seal

Astra is your 24x7 Security Team

Feature	Benefit
Web Application Firewall	
Automatic Blocking of Hackers	Hack attempts are stopped. If a threshold amount of attacks are stopped from one IP then that IP is blocked automatically
DDoS Protection (Layer 7)	Application layer DDoS attacks are stopped by rate limiting feature
Protection against Bad Bots	Malicious bots trying to scrape data or inject malware are detected and blocked. The bots list is regularly updated from our end.
SQLi Protection	One of the top ten in OWASP list and most exploited attack by hackers. Our rule set ensures that any attempt at sql injection attempt is prevented.
XSS Protection	The famous Cross site scripting attack is choice of many hackers and is often seen as a low hanging fruit. Astra protects seamlessly against this attack.
LFI/RFI Protection	Stops file inclusion attacks
Directory Traversal Protection	Prevents traversal attacks where attacker is trying to extract sensitive information from the website
Honeypot Systems	Traps bots and hackers while they are in fingerprinting mode
CMS specific Protection	Separate and customized rule set to protect against different CMS specific threats
Cloud Dashboard Visualizations	See complete security status of the website on our intuitive dashboard
IP Blocking/Whitelisting	Block malicious IP's and whitelist the trusted ones
Attacker Details	Attackers IP, browser, location, OS and more
Attack Vector Details	Details about the attack code being used to target site by the hacker
Login Activity Alert	Get notified whenever someone logs-into the website
Create Custom Exceptions	Customized Astra as per your site's functionality
WAF Settings	
Astra level	Set level of security to high, medium or low
Security Seal	Every website running Astra gets a dynamic security seal
Protection	Enable/disable Astra protection on-the-go
Reporting	
Daily Report	Get daily reports on email giving daily website security status
Login Notifications	Every time a user logs into the website, an email alert is sent. Email sent for failed login attempts too.
Rule Engine	
Custom Rules	Web technology specific rules. Customized for CMS and threats.
Updates	Ever evolving rule set
OWASP ModSecurity rule set	Derived from famous community driven ModSecurity project, protects against OWASP listed threats
