

astra

Your application is not as safe as you think.

Uncover vulnerabilities & patch them in record time with **Astra's Vulnerability Scanner & Management Suite**

Astra's vulnerability scanner is equipped with real hacker intelligence gathered from 1000+ vulnerability assessments and penetration tests (VAPT) done by our security experts over on varied applications.

The ever-evolving scanner helps you discover and report vulnerabilities in your application through a detailed security scan.

Security that comes without 100 emails, 250 google searches and painstaking PDFs:

You want complete security—but not at the cost of precious team hours over boring procedures. Astra's vulnerability management dashboard does everything for you. It puts all your security data in one place.

- Easy, accessible reports that you can interpret at a glance with the dashboard.
- Collaborate with developers from within the dashboard.
- Get detailed steps on bug fixing tailored to your issues and know exactly how to reproduce vulnerabilities with video Proof of Concepts (PoCs).
- Collaborate directly with our security engineers within the vulnerability management dashboard to fix vulnerabilities faster.
- Integrate Astra's Pentest with your Gitlab or Github CI/CD pipeline. And turn your SecOps into DevSecOps.

Astra's Vulnerability Scanner Features:

- Self-served, on the cloud continuous scanner that runs 2500+ test cases covering OWASP, SANS, ISO, SOC, etc.
- Rich and easy-to-understand dashboard with graphical representation that helps with vulnerability & patch management
- Developer & CXO level reporting
- Team collaboration options for assigning vulnerabilities for fix
- Multiple asset management under the same scan project
- Dedicated 'Vulnerabilities' section that offers insights on vulnerability impact, severity, CVSS score, potential loss (in \$)
- Comprehensive scanner that includes all the mandatory local and global compliance requirement checks

"High level of trust & confidence with Astra Security."

Olivier Trupiano

Founder & CEO,
Signalement.Net

(Whistleblowing Platform in Europe)

The single source of truth for application security of your organization

Astra's Vulnerability Scanner is ever learning from new CVEs, bug bounty data & intelligence gathered from pentest we do for companies in varied industries. Your CXOs get a birds-eye view on the security posture of your organization with data-backed insights which help them make the right decisions.

Furthermore, the "Vulnerabilities" section in Astra's Vulnerability Scanners provides a detailed analysis of every single vulnerability discovered in the scan results:

- Details of Vulnerability
- Affected Components (of application or N/W)
- Vulnerability Impact, Severity, CVSS Score and Potential Loss (in \$)
- Steps to Reproduce
- Steps to fix / Suggested Fixes
- Additional References

The screenshot shows a vulnerability report with the following details:

- Title:** Brute force possible on Coupon Codes
- Status:** Unsolved
- Bounty Loss:** \$5,000
- CVSS Score:** 8.1 High
- Potential Loss (in \$):** (Highlighted in a callout)
- Details of Vulnerability:** Brute forcing the Coupon Codes at the affected URL... in the disclosure of an active code. Let us say an attacker wants to retrieve... codes for purchase on the website, he can brute force the Coupon Code input... on the checkout page.
- Affected Components:** /checkout/cart/couponPost/
- Steps to Reproduce:**
 - In the affected URL, the coupon code was entered and the request after submitting the coupon code was intercepted and re-forced.
 - We were able to send requests with varying values for coupon codes. It was found that the CAPTCHA implemented.
- Suggested Fixes:**
 - Implement CAPTCHA.
 - Implement proper rate limiting.

In addition, to ensure utmost security we believe in 'Proactive Security' measures where we anticipate the infiltration techniques used by hackers and recommend additional security countermeasures.

Benefits:

Know weaknesses in your system before hackers do

Reduced TCO on vulnerability management

Meet data protection & other compliance requirements

360 degree visibility of your application's security
